

Backup Restore Test Report, September 2026

Document ID	ATL-REC-011
Test date	2026-09-18
Performed by	Senior platform engineer
Reviewed by	CTO

1. Backup configuration

Daily backups are taken of the production database and file storage using AWS Backup.

Backups are retained for 35 days and copied to a separate AWS account in another region.

2. Restore test

A full restore test of the production database was performed into an isolated account.

The database was restored successfully in 47 minutes. Record counts matched the source for all customer tables.

3. Follow-up

File storage restore will be included in the next test, planned for March 2027.
